Currency:	EUR
Total Net Asset Value of the whole Fund:	2,090,522,965 HUF
Net Asset Value of EUR series:	110,875 EUR
Net Asset Value per unit:	1.182273 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

Equity markets bounced back after a weaker start, finishing in the black in November. US indices pushed to new all-time highs, Japanese market performed strongly because of the weakening yen and even though European indices were underperformers, they still achieved profit during the month. As a result of increasing yields and expected economic plan of the new US president, a powerful rotation took place among sectors. Banks and basic materials were the winners of the changed situation, while defensive sectors lagged behind. People voted for the new president in the US and surprisingly Donald Trump won the election. Before the vote, investors were afraid of a Trump win, but after the results they saw Trump's success in a different perspective. They started to like Trump's economic plan, in which the president-elect promised structural reforms and tax reduction. For this reason, investors began to buy equities. The expected monetary tightening made US yields to increase. Because of improving yields, favorable macro and Trump's expansionary policy, USD strengthened against most currencies. Precious metals prices plunged during the month thanks to the strong dollar and more risk-taking, while copper's price soared due to improving growth prospects. Oil prices were highly volatile during the month. The price of Brent oil fell to \$45, but eventually closed above the \$50 levels. Uncertainties around the OPEC agreement triggered the price. However, in the end OPEC was able to reach an agreement on the first output cut in eight years. Asia was still divided in November, as while Japanese and Chinese stocks were strong, the other emerging market indices in Asia suffered. Weaker local currencies contributed to the better performance of Japan and China. The favourable macro environment also supported China. A huge outflow was taken place in the other regions as "Trump-sellers" took out their money from the regions because of the soaring US yields. In addition to that fears over a potential currency crisis did not help price increase.

ASSET ALLOCATION OF THE FUND ON 11/30/2016

Asset type	Weight
Collective securities	96.29 %
Current account	5.96 %
