Total Net Asset Value of the whole Fund:	8,306,183 PLN
Net Asset Value of PLN series:	8,306,183 PLN
Net Asset Value per unit:	0.010126 PLN

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to provide an alternative solution for those investors who are expecting a decline of the share prices on the Polish Stock Market. In case of declining share prices by its WIG20 short future exposure the fund ensures that the investor will get extra return on his investment. If the fund manager expects that the stock markets will go up than he reduces the option position, but if he sees higher risk in the stock markets than he will buy more put options for the WIG20 Index. Since the capital protection allows the fund manager to buy only limited amount of futures the maximum short exposure of the fund is 100% of the fund's net asset value. Since the fund is a dedicated bearish fund it intends to keep the WIG20 short exposure 20%-40% of net asset value, depends on the strategy of the Fund Manager. To protect the capital, the Fund mainly invests in Polish treasury bills, government bonds and other debt securities. The Fund offers 90% capital protection for the first trading day of the year under special condition. The 90% capital protection is ensured by the investment policy of the Fund, it does not mean a full capital protection.

MARKET SUMMARY:

Equity markets bounced back after a weaker start, finishing in the black in November. US indices pushed to new all-time highs, Japanese market performed strongly because of the weakening yen and even though European indices were underperformers, they still achieved profit during the month. As a result of increasing yields and expected economic plan of the new US president, a powerful rotation took place among sectors. Banks and basic materials were the winners of the changed situation, while defensive sectors lagged behind. People voted for the new president in the US and surprisingly Donald Trump won the election. Before the vote, investors were afraid of a Trump win, but after the results they saw Trump's success in a different perspective. They started to like Trump's economic plan, in which the president-elect promised structural reforms and tax reduction. For this reason, investors began to buy equities. The expected monetary tightening made US yields to increase. Because of improving yields, favorable macro and Trump's expansionary policy, USD strengthened against most currencies. Precious metals prices plunged during the month thanks to the strong dollar and more risk-taking, while copper's price soared due to improving growth prospects. Oil prices were highly volatile during the month. The price of Brent oil fell to \$45, but eventually closed above the \$50 levels. Uncertainties around the OPEC agreement triggered the price. However, in the end OPEC was able to reach an agreement on the first output cut in eight years. The Polish equity market overperformed the region in November. From a sector perspective utilities were the weakest, while basic materials and insurance sector were the top performers. The fund increased its portfolio weight in WIG20 and at the same time cut its MIDWIG exposure. Besides, the fund held insurance overweight during the month.

ASSET ALLOCATION OF THE FUND ON 11/30/2016
