Net Asset Value of PLN series:	20,692,705 PLN
Net Asset Value per unit:	1.145459 PLN

## INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

## RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	1.57 %
Annualized standard deviation of the benchmark's weekly yields:	0.28 %

## MARKET SUMMARY:

The US election result sparked a huge divergence across asset classes and also between developed and emerging markets. One of the memorable moves last month was the significant repricing across global yield curves with yields spiking higher on the prospect of fiscal stimulus under President-elect Trump. Indeed global developed yields increased to a large extent and closed the month with a spike ranging from 10 to 50 basispoints. Meanwhile, EUR declined 4% compared to the USD. The increasing volatility and yield-rise coupled with the deteriorating prospect for EM countries obviously took its toll on the performance of EM bonds. The sudden turnaround in flows kicked the can down further with an outflow reaching more than USD 6 billion of which hard currency accounted for nearly USD 3,5 billion. Equities demonstrated the most obvious divergence from the other asset classes, the S&P, basically driven by financials, gained 4%, along with Chinese and Russian indices. At the same time, European equities remained mostly flat. WTI increased by 6% until month end, among expectations of the OPEC meeting. Rising Fed hike expectations clearly weighed on gold, thus the commodity lost 8% by the end of November.

## ASSET ALLOCATION OF THE FUND ON 11/30/2016
