Net Asset Value of institutional series:	1,050,924,768 HUF
Net Asset Value per unit:	0.840434 HUF

## INVESTMENT POLICY OF THE FUND:

The fund's aim is to earn capital gains by taking positions in a wide range of assets while keeping risk under pre-defined limits. The assets are selected based on fundamental and technical criteria from the widest range of industry and country exposures possible. Based on medium and long-term trends, the fund can buy or sell equities, bonds and other securities, and take various exposures using exchange (futures, options) and OTC derivatives (IRS and currency forwards). Naked shorts on securities are not allowed. The manager selects and builds positions based on fundamental and technical analysis in such a way, that the fund's return can exceed that of bank deposits over a medium-term horizon. Equally important focus is given to risk management which targets Level 5 risk bracket. The fund is not targeting any specific sectors, countries or asset classes, but most of its exposures will be taken on US and European exchanges, or markets regulated by the capital market authorities of the United States of America and the countries of the European Union. The fund's net corrected risk exposure may go up to 200 percent of the portfolio, in accordance with the Hungarian capital market acts and regulations. The fund can also run a net short exposure, also in accordance with the above mentioned regulatory limits.

## MARKET SUMMARY:

Equity markets bounced back after a weaker start, finishing in the black in November. US indices pushed to new all-time highs, Japanese market performed strongly because of the weakening yen and even though European indices were underperformers, they still achieved profit during the month. As a result of increasing yields and expected economic plan of the new US president, a powerful rotation took place among sectors. Banks and basic materials were the winners of the changed situation, while defensive sectors lagged behind. People voted for the new president in the US and surprisingly Donald Trump won the election. Before the vote, investors were afraid of a Trump win, but after the results they saw Trump's success in a different perspective. They started to like Trump's economic plan, in which the president-elect promised structural reforms and tax reduction. For this reason, investors began to buy equities. The expected monetary tightening made US yields to increase. Because of improving yields, favorable macro and Trump's expansionary policy, USD strengthened against most currencies. Precious metals prices plunged during the month thanks to the strong dollar and more risk-taking, while copper's price soared due to improving growth prospects. Oil prices were highly volatile during the month. The price of Brent oil fell to \$45, but eventually closed above the \$50 levels. Uncertainties around the OPEC agreement triggered the price. However, in the end OPEC was able to reach an agreement on the first output cut in eight years. The fund started the month with slight short equity positions that were replaced with long positions through Nikkei, US small-cap, financial and energy sector ETFs after the US election. From the second week of the month, the fund opened short positions in gold, and also had Turkish lira short bets.
