Net Asset Value of CZK series:	309,717 CZK
Net Asset Value per unit:	1.032389 CZK

### INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

Annualized standard deviation of the fund's weekly yields:	3.13 %
Annualized standard deviation of the benchmark's weekly yields:	0.20 %

### MARKET SUMMARY:

Positive mood continued in the markets in December since main equity indices soared without exception during the last month of the year. Apart from the supportive technical picture and improving global growth, record inflow into equities in the US, weakening euro and lower weight in equity positions before the Italian referendum in Europe and declining yen and favorable macro data in Japan helped the markets. There were several interesting actions from central banks in December as both ECB and FED made important decisions in their monetary policy. The European Central Bank extended its QE bond purchases program until next December. However, it reduced its monthly purchases from 80 billion to 60 billion. Investors closed their euro long positions because the announcement differed from the previously expected market consensus. Weaker euro had a positive effect on the European markets. The FED raised its key interest rate by 25 bps to 0,75% which were in line with expectations but Yellen indicated a more hawkish view on the anticipated pace of monetary tightening. As a result, increasing dollar power was a determinant market factor during the month. The strength of dollar fueled fears in emerging markets where market participants worry about a prospective currency crisis. Also, rising US yield put high pressure on emerging countries that have huge amounts of dollar-denominated debt. While Italian Prime Minister Renzi resigned after losing the referendum. Oil prices jumped to their year-to-date highs in December thanks to the positive market environment. Additional production cut and closing of short positions supported the strengthening of the commodity. Industrial and precious metals did not perform well during the month as strong dollar had a detrimental effect on their prices. The fund finished this year with great results thanks to the above average performance of Russian market, EU and Austrian financial sector and long-term Hungarian investments. Polish positions have been built in the portfolio during the month. Apart from that the fund kept its overweight exposure to the financial sector because of surging yields.

### ASSET ALLOCATION OF THE FUND ON 12/31/2016
