Total Net Asset Value of the whole Fund:	13,707,285,603 HUF
Net Asset Value of institutional series:	9,295,946,681 HUF
Net Asset Value per unit:	1.433666 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

Annualized standard deviation of the fund's weekly yields:	15.37 %
Annualized standard deviation of the benchmark's weekly yields:	15.46 %

## MARKET SUMMARY:

Positive mood continued in the markets in December since main equity indices soared without exception during the last month of the year. Apart from the supportive technical picture and improving global growth, record inflow into equities in the US, weakening euro and lower weight in equity positions before the Italian referendum in Europe and declining yen and favorable macro data in Japan helped the markets. There were several interesting actions from central banks in December as both ECB and FED made important decisions in their monetary policy. The European Central Bank extended its QE bond purchases program until next December. However, it reduced its monthly purchases from 80 billion to 60 billion. Investors closed their euro long positions because the announcement differed from the previously expected market consensus. Weaker euro had a positive effect on the European markets. The FED raised its key interest rate by 25 bps to 0,75% which were in line with expectations but Yellen indicated a more hawkish view on the anticipated pace of monetary tightening. As a result, increasing dollar power was a determinant market factor during the month. The strength of dollar fueled fears in emerging markets where market participants worry about a prospective currency crisis. Also, rising US yield put high pressure on emerging countries that have huge amounts of dollar-denominated debt. While Italian Prime Minister Renzi resigned after losing the referendum. Oil prices jumped to their year-to-date highs in December thanks to the positive market environment. Additional production cut and closing of short positions supported the strengthening of the commodity. Industrial and precious metals did not perform well during the month as strong dollar had a detrimental effect on their prices. The fund held higher equity weight compared to the reference index in its portfolio, in which US equity market's overweight was the most significant bet.

## ASSET ALLOCATION OF THE FUND ON 12/31/2016
