Total Net Asset Value of the whole Fund:	3,882,555,484 HUF
Net Asset Value of institutional series:	707,817,030 HUF
Net Asset Value per unit:	1.959721 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Positive momentum of main equity indices stopped as Donald Trump has brought some actions in the markets, which oscillated within a narrow range in the beginning of the month. Even though Dow Jones index has surpassed the magical 20,000 level in January, the index was not able to maintain this level due to uncertainties around the economic policy of the new US government. The Trump administration had an unfavorable effect on the Japanese and the European equities too, which closed the month in the red. After the inauguration ceremony, Trump got down to work by dumping the Trans-Pacific Partnership (TPP) and easing requirements on infrastructure investments. The US government started its protectionist rhetoric in January since it made the question of import tariff and the renegotiation of trade deals its top priorities. Meanwhile, plans on relaxation of regulations and tax reductions were hardly mentioned which investor did not appreciate. Additionally, British PM Theresa May's speech on a "clean" Brexit did not help market mood. May still visualized the future of UK outside the single market but at the same time hopes to have a new free trade deal with the EU. The unsuccessful meeting of European finance ministers on the Greek debt-relief measures also had a detrimental effect on the performance of European markets. Dollar gave back all of its growth from the previous month in January because of the vanishing "Trump trade" positions and the US president's break with the "strong dollar" policy. As a result of the weaker dollar, industrial and precious metals' prices were rising during the month.

Turkish equities outperformed Emerging markets in January thanks to the weaker currency and the calmer market tone on Turkish assets. Because economic processes are still unfavorable, Fitch cut Turkish's sovereign credit rating to junk. The fund held a more defensive portfolio during the month since it still expects Turkish equities to underperform in the near future. Financials underweight is the most determinant bet in the portfolio.

ASSET ALLOCATION OF THE FUND ON 01/31/2017
