Total Net Asset Value of the whole Fund:	187,381,118 PLN
Net Asset Value of HUF series:	3,693,569,360 HUF
Net Asset Value per unit:	1.272865 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey, although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Positive momentum of main equity indices stopped as Donald Trump has brought some actions in the markets, which oscillated within a narrow range in the beginning of the month. Even though Dow Jones index has surpassed the magical 20,000 level in January, the index was not able to maintain this level due to uncertainties around the economic policy of the new US government. The Trump administration had an unfavorable effect on the Japanese and the European equities too, which closed the month in the red. After the inauguration ceremony, Trump got down to work by dumping the Trans-Pacific Partnership (TPP) and easing requirements on infrastructure investments. The US government started its protectionist rhetoric in January since it made the question of import tariff and the renegotiation of trade deals its top priorities. Meanwhile, plans on relaxation of regulations and tax reductions were hardly mentioned which investor did not appreciate. Additionally, British PM Theresa May's speech on a "clean" Brexit did not help market mood. May still visualized the future of UK outside the single market but at the same time hopes to have a new free trade deal with the EU. The unsuccessful meeting of European finance ministers on the Greek debt-relief measures also had a detrimental effect on the performance of European markets. Dollar gave back all of its growth from the previous month in January because of the vanishing "Trump trade" positions and the US president's break with the "strong dollar" policy. As a result of the weaker dollar, industrial and precious metals' prices were rising during the month.

Polish equities performed the best in the Central European universe in January due to the better-than-expected macro data. Small-cap sectors had an incredible month because of the positive corporate reports, while investors did not like the oil industry thanks to the increasing state share and weak financial reports. The fund kept overweight in the financial sector, which performed well in the month as a consequence of rather positive news flow from the industry.
