Net Asset Value of R series:	2,362,686,064 HUF
Net Asset Value per unit:	1.272770 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, pricing, technical and behavioural/psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## DISTRIBUTORS

Raiffeisen Bank Zrt.

## RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 1.66 %  
 Annualized standard deviation of the benchmark's weekly yields: 0.23 %

## MARKET SUMMARY:

Main equity indices performed well in February thanks to the improving macro environment. US equities were supported by the US government's promised tax reform, the inflow of money and the better-than-expected earnings. European stocks were also positively affected by European companies' favorable profit trends. However, the market closely watches risks in Europe. Because of the approaching European elections, investors paid more attention to the strengthening populist parties. Le Pen's support in France has increased in the last surveys, while in the Netherlands the Party for Freedom currently leads the polls. Besides, Greek debt problems are back again. EU and IMF were unable to agree on the necessary Greek reforms as EU officials claimed that IMF is too pessimistic about the path of Greek debt. For these reasons, investors preferred defensive sectors (healthcare and consumer staples stocks) to cyclical. Dollar strengthened in February since more and more central bankers emphasized the need for rate hike in light of the stable economic growth and rising inflation. As a result of European political uncertainties many investors bought safe have assets like gold and silver, which prices soared during the month.

The fund kept its high risk level in February. Because of the increasing European political risks it changed its bond short positions to European bank stocks. In addition to that it took profit from its Polish long positions, while opened German and Emerging markets equity positions against Turkish short. The fund also raised its USDHUF long exposure during the month.
