Total Net Asset Value of the whole Fund:	4,128,786,840 HUF
Net Asset Value of TRY series:	1,609,103 TRY
Net Asset Value per unit:	1.422393 TRY

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

Risk and Reward Profile:

MARKET SUMMARY:

Main equity indices performed well in February thanks to the improving macro environment. US equities were supported by the US government's promised tax reform, the inflow of money and the better-than-expected earnings. European stocks were also positively affected by European companies' favorable profit trends. However, the market closely watches risks in Europe. Because of the approaching European elections, investors paid more attention to the strengthening populist parties. Le Pen's support in France has increased in the last surveys, while in the Netherlands the Party for Freedom currently leads the polls. Besides, Greek debt problems are back again. EU and IMF were unable to agree on the necessary Greek reforms as EU officials claimed that IMF is too pessimistic about the path of Greek debt. For these reasons, investors preferred defensive sectors (healthcare and consumer staples stocks) to cyclical. Dollar strengthened in February since more and more central bankers emphasized the need for rate hike in light of the stable economic growth and rising inflation. As a result of European political uncertainties many investors bought safe have assets like gold and silver, which prices soared during the month.

Turkish stocks performed moderately well in local currency terms, while in USD terms they were top performers thanks to the stronger currency. The situation in the country did not worsen during the month which investors appreciated. The fund kept its bank UW and preferred to be more active in off-benchmark equity bets.

ASSET ALLOCATION OF THE FUND ON 02/28/2017
