Net Asset Value of HUF series:	4,354,715,634 HUF
Net Asset Value per unit:	1.372289 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Main equity indices performed well in February thanks to the improving macro environment. US equities were supported by the US government's promised tax reform, the inflow of money and the better-than-expected earnings. European stocks were also positively affected by European companies' favorable profit trends. However, the market closely watches risks in Europe. Because of the approaching European elections, investors paid more attention to the strengthening populist parties. Le Pen's support in France has increased in the last surveys, while in the Netherlands the Party for Freedom currently leads the polls. Besides, Greek debt problems are back again. EU and IMF were unable to agree on the necessary Greek reforms as EU officials claimed that IMF is too pessimistic about the path of Greek debt. For these reasons, investors preferred defensive sectors (healthcare and consumer staples stocks) to cyclical. Dollar strengthened in February since more and more central bankers emphasized the need for rate hike in light of the stable economic growth and rising inflation. As a result of European political uncertainties many investors bought safe have assets like gold and silver, which prices soared during the month.

Equity exposure in the fund, in which US market represented the biggest slice, slightly exceeded the reference index in February. From a sector perspective the most significant bets were the US financials against the European financials.
