Total Net Asset Value of the whole Fund:	2,416,388,272 HUF
Net Asset Value of EUR series:	157,531 EUR
Net Asset Value per unit:	1.287062 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

Risk and Reward Profile:

MARKET SUMMARY:

Main equity indices achieved mixed results in March. European stocks performed well during the month, US market finished around its last month closing price, while Japanese equities ended slightly in the red. In the beginning of the month US stock market increased because of strong macro data, but the withdrawal of healthcare bill eventually crushed the market mood. Investors believe that the expected fiscal stimulus package should be lower as Obamacare remains in place. Also, high equity exposure did not help the growth of US equities. Contrary to the US market, European stocks were bought thanks to the improving macro, the money inflow in the region and the weakening populist parties. European elections' season has started with the Dutch election, where PM Rutte's party achieved better than expected results, while the far-right party performed below expectations. FED raised its benchmark interest rate by 25 bps in March. However, Yellen suggested a less tight monetary policy in the future. The rate hike was already priced in before the meeting but the less hawkish tone from Yellen was unexpected, as a result USD was weaker from the second half of the month. Oil prices plunged in March as US production increased, high oil long exposures were cut back and investors started to fear of oversupply. At the end of the month prices were rebounded a bit because of plans about the extension of oil output cut. Asian markets achieved mixed performance during the month as while many Asian countries closed in the black, China and Japan were in the red. For the latter, the strengthening of yen affected market prices negatively.
