Currency:	HUF
Total Net Asset Value of the whole Fund:	5,460,424 EUR
Net Asset Value of HUF series:	1,113,668,578 HUF
Net Asset Value per unit:	1.227512 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign equities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. In order to achieve its aim, the fund can hold collective investment vehicles and ETFs in its portfolio. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

MARKET SUMMARY:

Main equity indices achieved mixed results in March. European stocks performed well during the month, US market finished around its last month closing price, while Japanese equities ended slightly in the red. In the beginning of the month US stock market increased because of strong macro data, but the withdrawal of healthcare bill eventually crushed the market mood. Investors believe that the expected fiscal stimulus package should be lower as Obamacare remains in place. Also, high equity exposure did not help the growth of US equities. Contrary to the US market, European stocks were bought thanks to the improving macro, the money inflow in the region and the weakening populist parties. European elections' season has started with the Dutch election, where PM Rutte's party achieved better than expected results, while the far-right party performed below expectations. FED raised its benchmark interest rate by 25 bps in March. However, Yellen suggested a less tight monetary policy in the future. The rate hike was already priced in before the meeting but the less hawkish tone from Yellen was unexpected, as a result USD was weaker from the second half of the month. Oil prices plunged in March as US production increased, high oil long exposures were cut back and investors started to fear of oversupply. At the end of the month prices were rebounded a bit because of plans about the extension of oil output cut. Climate-change related equities continued its growth in March since apart from renewable energy stocks, all other sectors were able to finish in the black.

ASSET ALLOCATION OF THE FUND ON 03/31/2017
