Total Net Asset Value of the whole Fund:	7,677,999,544 HUF
Net Asset Value of PI series:	107,484 PLN
Net Asset Value per unit:	1.074840 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

Risk and Reward Profile:

MARKET SUMMARY:

Main equity indices achieved mixed results in March. European stocks performed well during the month, US market finished around its last month closing price, while Japanese equities ended slightly in the red. In the beginning of the month US stock market increased because of strong macro data, but the withdrawal of healthcare bill eventually crushed the market mood. Investors believe that the expected fiscal stimulus package should be lower as Obamacare remains in place. Also, high equity exposure did not help the growth of US equities. Contrary to the US market, European stocks were bought thanks to the improving macro, the money inflow in the region and the weakening populist parties. European elections' season has started with the Dutch election, where PM Rutte's party achieved better than expected results, while the far-right party performed below expectations. FED raised its benchmark interest rate by 25 bps in March. However, Yellen suggested a less tight monetary policy in the future. The rate hike was already priced in before the meeting but the less hawkish tone from Yellen was unexpected, as a result USD was weaker from the second half of the month. Oil prices plunged in March as US production increased, high oil long exposures were cut back and investors started to fear of oversupply. At the end of the month prices were rebounded a bit because of plans about the extension of oil output cut. The Russian market was driven by oil price movements in March. For this reason, market correction still continued in Russia in the beginning of the month. The fund used this opportunity to increase its Russian exposure. As a result, Russia was overweighted during the month. From a sector perspective we preferred oil, bank and retail stocks.

ASSET ALLOCATION OF THE FUND ON 03/31/2017
