Net Asset Value of HUF series:	7,382,771,012 HUF
Net Asset Value per unit:	1.481849 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to create for its investors an investment portfolio that generates a positive yield under all circumstances; in other words, it takes a 'total return' approach. It does this by using various analysis techniques to select the asset classes and investment funds that have the greatest potential to appreciate in value, and by investing in the shares of investment funds and in collective investment securities. The fund primarily invests its capital in the funds managed by Aegon Hungary Investment Fund Management, but it may also purchase other investment funds and collective investment securities for its portfolio for the purpose of diversification, if the given asset class is not yet covered by the fund management company's own funds. Indirectly, the fund is capable of accessing the entire known investment universe of today through the purchase of investment fund shares (in bond markets, money markets, equity markets, property market, private equity, derivatives and other regulated and OTC derivative products, commodity-market products, currencies etc.), and of making its investments both at domestic and international level. To ensure liquidity, the fund may hold discount treasury bills and government bonds issued by the State Debt Management Centre (ÁKK), interest-bearing securities guaranteed by the State of Hungary, and bonds issued by the National Bank of Hungary. In order to achieve a positive yield, the fund makes active use of risk management procedures and carefully selects the position size of its riskier investments. Since the range of investments includes foreign currency-denominated investments, ETFs and investment fund shares, investors in the fund are also exposed to currency risk. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%, except AEGON Money Market Fund, AEGON Domestic Bond Fund, AEGON MoneyMaxx Express Fund, AEGON Alfa Derivative Fund, AEGON Central European Credit Fund and AEGON Ózon Capital Protected Fund.

Aegon Emerging Europe Bond Fund	0.0%
Total:	100%

MARKET SUMMARY:

Main equity indices finished slightly above their last month closing prices in April thanks to the result of the French presidential election and the announcement of Trump's tax reform. In the beginning of April investors built defensive portfolios as several risks kept market participants in suspense. Intensifying North Korean and Syrian tensions, decaying US-Russian relationship, uncertainties around the timeline of Trump's tax plan and the precarious outcome of the French election made investors cautious. By the end of the month equity indices bounced back as US tax reform was unveiled and the result of the first round of the French election was favorable. Also, strong macro environment and better-than-expected corporate earnings supported the market increase. At the end of April Trump announced the main points of the long-awaited tax plan, which was welcomed by the market. However, many members of the Congress oppose against the plan as it is not clear how the government wants to raise revenues to avoid mounting debt. Centrist Emmanuel Macron and far-right populist Marine Le Pen advanced into the second round of the French presidential election, where polls suggest that Macron is the clear favorite. For this reason, European cyclical stocks surged in April, in which the financial sector was the top performing industry, as besides the improving economic growth, political risks also decrease in the region. British PM Theresa May called for a snap general election in Great Britain that will take place in June. As a consequence, the pound appreciated dramatically. Analysts believe that British government will have more room for manoeuvre in the Brexit negotiations. Due to the appreciation of pound, stock prices of export companies in the basic material sector have plunged, negatively affecting the whole British stock market. As a result of increasing geopolitical tensions, investors bought oil in the beginning of the month, but oil prices finished below their last month closing values because of rising US oil supplies.
