Net Asset Value of R series:	2,691,476,926 HUF
Net Asset Value per unit:	1.294287 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, pricing, technical and behavioural/psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

Risk and Reward Profile:

MARKET SUMMARY:

During May, a slight increase was observable in the price of the main equity indices. Brexit related news emerged at the beginning of the month: some detail of the Juncker-May supper was leaked out and the EU has raised the Brexit fine to €100Bn (gross). In addition, at the end of the month, a survey was published stating the possibility that the Conservatives may lose majority in parliament at early elections in June - all of which has contributed to the weakening pound during the month. While European stocks were heavily bought in early May, the oil price dropped to five months low due to the fear of over-supply and poor technical picture. Although the OPEC has prolonged the production restriction for 9 months at its month-end meeting as it was expected, for the Libyan and Nigerian production it did not assign a ceiling. As a result, the oil price closed close to its opening price in May. The outcome of the French presidential election has also come as it was expected: Emmanuel Macron won 66 while Marine Le Pen got 34 percent of the votes. News from the US came in relation to the Trump-Russian relations and the dismissal of the FBI President. In the middle of the month, the possibility of launching a resignation process against the President this year was priced at 29% vs. the previous 19%. As political risks increased in the US and decreased in Europe at the same time, investors shifted from Dollar to Euro pulling the EURUSD cross to its new Trump-era high. The banking sector was heavily shorted but short selling dominated in each sector. The turn came at the end of the month, when Trump has signed the Arms Agreement with Saudi Arabia - as a result arm manufacturers' and technological company's stocks were bought. In addition, due to the favorable technical picture and news from supportive monetary policy, S&P 500 closed at all time high. The weight of individual shares was reduced in May and the money was shifted into European (mainly German) and S&P 500 futures. Mostly Immofinanz, WizzAir and Raiffeisen shares were sold or reduced. Our Turkish exposure was stopped out when the domestic index reached its new high (in domestic currency).

ASSET ALLOCATION OF THE FUND ON 05/31/2017
