Net Asset Value of HUF series:	2,403,102,515 HUF
Net Asset Value per unit:	1.586488 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

During May, a slight increase was observable in the price of the main equity indices. Brexit related news emerged at the beginning of the month: some detail of the Juncker-May supper was leaked out and the EU has raised the Brexit fine to €100Bn (gross). In addition, at the end of the month, a survey was published stating the possibility that the Conservatives may lose majority in parliament at early elections in June - all of which has contributed to the weakening pound during the month. While European stocks were heavily bought in early May, the oil price dropped to five months low due to the fear of over-supply and poor technical picture. Although the OPEC has prolonged the production restriction for 9 months at its month-end meeting as it was expected, for the Libyan and Nigerian production it did not assign a ceiling. As a result, the oil price closed close to its opening price in May. The outcome of the French presidential election has also come as it was expected: Emmanuel Macron won 66 while Marine Le Pen got 34 percent of the votes. News from the US came in relation to the Trump-Russian relations and the dismissal of the FBI President. In the middle of the month, the possibility of launching a resignation process against the President this year was priced at 29% vs. the previous 19%. As political risks increased in the US and decreased in Europe at the same time, investors shifted from Dollar to Euro pulling the EURUSD cross to its new Trump-era high. The banking sector was heavily shorted but short selling dominated in each sector. The turn came at the end of the month, when Trump has signed the Arms Agreement with Saudi Arabia - as a result arm manufacturers' and technological company's stocks were bought. In addition, due to the favorable technical picture and news from supportive monetary policy, S&P 500 closed at all time high. We overweight Japanese stocks. There is an increasing trend in the Asian market (Taiwan, India, Korea, etc.); the only exception is the internal market in China: Shanghai and Shenzhen markets are less transparent. In contrast, Chinese stocks in the Hong Kong stock exchange perform well, indicating a global risk-seeking.

ASSET ALLOCATION OF THE FUND ON 05/31/2017

Asset type	Weight
