Net Asset Value of institutional series:	1,003,441,246 HUF
Net Asset Value per unit:	0.802461 HUF

INVESTMENT POLICY OF THE FUND:

The fund's aim is to earn capital gains by taking positions in a wide range of assets while keeping risk under pre-defined limits. The assets are selected based on fundamental and technical criteria from the widest range of industry and country exposures possible. Based on medium and long-term trends, the fund can buy or sell equities, bonds and other securities, and take various exposures using exchange (futures, options) and OTC derivatives (IRS and currency forwards). Naked shorts on securities are not allowed. The manager selects and builds positions based on fundamental and technical analysis in such a way, that the fund's return can exceed that of bank deposits over a medium-term horizon. Equally important focus is given to risk management which targets Level 5 risk bracket. The fund is not targeting any specific sectors, countries or asset classes, but most of its exposures will be taken on US and European exchanges, or markets regulated by the capital market authorities of the United States of America and the countries of the European Union. The fund's net corrected risk exposure may go up to 200 percent of the portfolio, in accordance with the Hungarian capital market acts and regulations. The fund can also run a net short exposure, also in accordance with the above mentioned regulatory limits.

Risk and Reward Profile:

MARKET SUMMARY:

During May, a slight increase was observable in the price of the main equity indices. Brexit related news emerged at the beginning of the month: some detail of the Juncker-May supper was leaked out and the EU has raised the Brexit fine to €100Bn (gross). In addition, at the end of the month, a survey was published stating the possibility that the Conservatives may lose majority in parliament at early elections in June - all of which has contributed to the weakening pound during the month. While European stocks were heavily bought in early May, the oil price dropped to five months low due to the fear of over-supply and poor technical picture. Although the OPEC has prolonged the production restriction for 9 months at its month-end meeting as it was expected, for the Libyan and Nigerian production it did not assign a ceiling. As a result, the oil price closed close to its opening price in May. The outcome of the French presidential election has also come as it was expected: Emmanuel Macron won 66 while Marine Le Pen got 34 percent of the votes. News from the US came in relation to the Trump-Russian relations and the dismissal of the FBI President. In the middle of the month, the possibility of launching a resignation process against the President this year was priced at 29% vs. the previous 19%. As political risks increased in the US and decreased in Europe at the same time, investors shifted from Dollar to Euro pulling the EURUSD cross to its new Trump-era high. The banking sector was heavily shorted but short selling dominated in each sector. The turn came at the end of the month, when Trump has signed the Arms Agreement with Saudi Arabia - as a result arm manufacturers' and technological company's stocks were bought. In addition, due to the favorable technical picture and news from supportive monetary policy, S&P 500 closed at all time high. We continued to build the individual stock portfolio by investing into regional shares (Romanian, Austrian stock in addition to Hungarian small caps). Also, we entered into long position in the BUX and developed market stocks.

ASSET ALLOCATION OF THE FUND ON 05/31/2017
