Net Asset Value of HUF series:	26,050,054,835 HUF
Net Asset Value per unit:	2.718289 HUF

INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

MARKET SUMMARY:

Markets have had a few themes to contend with. The first was the sharp decline in the price of Oil and the second was the big spike in volatility - particularly for rates - in the last week of the month following a chorus of hawkish central bank speak. The persistent weakness in commodities deserves attention. Large parts of the EM asset universe, especially in EM credit, are directly or indirectly tied to commodities and hence it is no surprise that historical correlations between commodity prices and EM credit spreads have been pronounced. EM spreads thus widened overall during the month from 318 basispoints to 327 basispoints, with oil-exporter countries being the underperformers. By the end of the month, ECB president Draghi outlined that as the European economy continues to recover monetary policy needs to adjust the parameters of its policy instruments to keep its stance broadly unchanged. The market took this comment as rather hawkish and even the following ECB comments that meant to adjust the market's perception of the speech was unable to stop the repricing of the bonds in a sustainable way. The 10-year German government bond's yield rose by 16 basispoints, but surprisingly periphery bonds remained quite resilient comparing to the German papers.

ASSET ALLOCATION OF THE FUND ON 06/30/2017
