Net Asset Value of HUF series:	7,949,666,276 HUF
Net Asset Value per unit:	2.278041 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to function as a stable, very low-risk investment vehicle, but to offer investors better returns than bank deposits. The portfolio elements are selected in accordance with these principles. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills distributed by the State Debt Management Centre (ÁKK), and bonds issued by the National Bank of Hungary. The average duration of the assets in the portfolio is 6 months, and the average remaining life of the assets may not exceed 12 months. The fund is low-risk, but its portfolio may also contain forint-denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. In the case of floating rate, forint denominated debt securities the average duration is equal to the number of days remaining until the next interest payment day. The fund may also invest its liquid assets in bank deposits. Besides this, the fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk. Aegon Money Market Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

MARKET SUMMARY:

The Hungarian money market exhibited solely microscopic movement in June. During the month 75 billion HUF was squeezed to the system from the reference instrument, decreasing the amount of deposits at the NBH to 500 billion HUF. As for the liquidity conditions, liquidity abundance as the NBH set the net target amount of the reference instrument at 300 billion HUF by the end of Q3 at its meeting held on the 20th of June. Apart from this, the NBH left the base rate and other monetary policy parameters untouched.

The GDMA announced four 3-month T-bill auction for the month, with offered amount of 15 and 20 billion HUF per two auctions respectively. Average auction yields fluctuated between 5 and 3 bps. Coverage ratios were between 1.55x-2.40x. As for the 12-month T-bills, auction yields were hovering between 9 and 11 basis points - with coverage ratios of 1.48x and 2.64x.

3 and 12-month reference yields both stagnated for the month, around the 5 and 10 basis point levels. However, slow decline in yields is on the cards based on the lower supply in case of HTBs (15 billion HUF) and the new cap on the reference instrument.

ASSET ALLOCATION OF THE FUND ON 06/30/2017

Asset type	Weight
T-bills	43.73 %
