Total Net Asset Value of the whole Fund:	2,455,303,531 HUF
Net Asset Value of EUR series:	234,629 EUR
Net Asset Value per unit:	1.293785 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

The American stock market reached an absolute peak in July, for example the Nasdaq and the DJIA indices. However, Merrill Lynch shares the opinion of the technical analyst of JP Morgan that the culmination of the market can be followed by a selling wave in summer or in autumn.

At the beginning of July, the EU-Japan free trade agreement was announced that abolish 99 percent of the duties and many trade barriers between the two countries. In the first half of the month, the German 10-year bond yield passed the 0.5 percent rate which led to a selling wave on other bond and equity markets. In Great Britain, the British currency passed through the 1.31 level for the first time since Brexit which was due to the optimism about the exit negotiations and the slump of the dollar.

Overseas, the dollar weakened further and reached a two year low against the euro. After the FED meeting in July, two main questions remained: the schedule of the decrease of the balance sheet and the decline of the inflation. According to the WSJ, the FED will not increase the base rate until December. Based on a recent survey, the picture about Trump has further worsened thanks to the "Russian scandal" and the infighting within the Republican Party. In accordance with Trump's previous conviction, the USA had an opposite view of climate protection than the other 19 countries on the G20 summit.

The rebound of the oil price that has started in last month continued in July. The oil moved near the 8-week peak, approaching 50 dollars. Beside the weak dollar, the possible culmination of the American production, the export limitation of Saudi and the situation of Venezuela can be important in terms of supply.

Asia has outperformed developed markets in July. The Chinese and Indian equity markets were the best performers, while the Japanese market underperformed. The Chinese short-term macro prospects are less gloomy and the GDP data shows an increase again. At the middle of the month, Fitch confirmed China's A+ rating.

ASSET ALLOCATION OF THE FUND ON 07/31/2017
