Currency:	EUR
Total Net Asset Value of the whole Fund:	4,781,740 EUR
Net Asset Value of EUR series:	1,609,037 EUR
Net Asset Value per unit:	0.009142 EUR

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign equities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. In order to achieve its aim, the fund can hold collective investment vehicles and ETFs in its portfolio. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

MARKET SUMMARY:

The American stock market reached an absolute peak in July, for example the Nasdaq and the DJIA indices. However, Merrill Lynch shares the opinion of the technical analyst of JP Morgan that the culmination of the market can be followed by a selling wave in summer or in autumn.

At the beginning of July, the EU-Japan free trade agreement was announced that abolish 99 percent of the duties and many trade barriers between the two countries. In the first half of the month, the German 10-year bond yield passed the 0.5 percent rate which led to a selling wave on other bond and equity markets. In Great Britain, the British currency passed through the 1.31 level for the first time since Brexit which was due to the optimism about the exit negotiations and the slump of the dollar.

Overseas, the dollar weakened further and reached a two year low against the euro. After the FED meeting in July, two main questions remained: the schedule of the decrease of the balance sheet and the decline of the inflation. According to the WSJ, the FED will not increase the base rate until December. Based on a recent survey, the picture about Trump has further worsened thanks to the "Russian scandal" and the infighting within the Republican Party. In accordance with Trump's previous conviction, the USA had an opposite view of climate protection than the other 19 countries on the G20 summit.

The rebound of the oil price that has started in last month continued in July. The oil moved near the 8-week peak, approaching 50 dollars. Beside the weak dollar, the possible culmination of the American production, the export limitation of Saudi and the situation of Venezuela can be important in terms of supply.

The fund closed in positive in July, due to the good performance of all the sectors. The agricultural, water and utilities indices were the best performers, while the renewable and the waste were the weakest; however their positive yield also contributed to the fund's performance.

ASSET ALLOCATION OF THE FUND ON 07/31/2017
