Total Net Asset Value of the whole Fund:	203,812,921 PLN
Net Asset Value of institutional series:	149,596,099 PLN
Net Asset Value per unit:	1.437924 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey, although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

The American stock market reached an absolute peak in July, for example the Nasdaq and the DJIA indices. However, Merrill Lynch shares the opinion of the technical analyst of JP Morgan that the culmination of the market can be followed by a selling wave in summer or in autumn.

At the beginning of July, the EU-Japan free trade agreement was announced that abolish 99 percent of the duties and many trade barriers between the two countries. In the first half of the month, the German 10-year bond yield passed the 0.5 percent rate which led to a selling wave on other bond and equity markets. In Great Britain, the British currency passed through the 1.31 level for the first time since Brexit which was due to the optimism about the exit negotiations and the slump of the dollar.

Overseas, the dollar weakened further and reached a two year low against the euro. After the FED meeting in July, two main questions remained: the schedule of the decrease of the balance sheet and the decline of the inflation. According to the WSJ, the FED will not increase the base rate until December. Based on a recent survey, the picture about Trump has further worsened thanks to the "Russian scandal" and the infighting within the Republican Party. In accordance with Trump's previous conviction, the USA had an opposite view of climate protection than the other 19 countries on the G20 summit.

The rebound of the oil price that has started in last month continued in July. The oil moved near the 8-week peak, approaching 50 dollars. Beside the weak dollar, the possible culmination of the American production, the export limitation of Saudi and the situation of Venezuela can be important in terms of supply.

On the Polish market, best performers were the banking sector and energy sector, while the IT sector was the weakest in July. We kept overweight of the banking sector and underweight of the utilities; out of which the latter had an adverse effect due to the good performance of the PGE. In July, we did not participate in the IPO of Play, because we thought it was overpriced.

ASSET ALLOCATION OF THE FUND ON 07/31/2017
