Net Asset Value of PLN series:	12,327,330 PLN
Net Asset Value per unit:	1.176806 PLN

## INVESTMENT POLICY OF THE FUND:

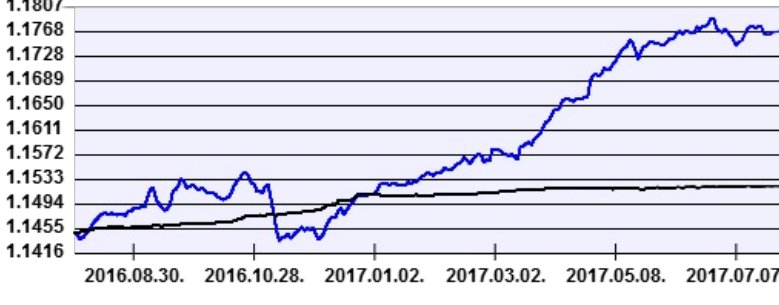

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

## RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 1.19 %

Annualized standard deviation of the benchmark's weekly yields: 0.15 %

## MARKET SUMMARY:

July had two main themes to contend with. One was the continuously dropping volatility on the markets and the second was the rapid depreciation of the US dollar. In case of the former, it is worth mentioning that the VIX index reached the 9,05 level intraday which has been never seen before in the history of the index. The US currency continued to depreciate by 3,64% against the EUR in the month. The reasons behind the devaluation is attributable to the fact that market is pricing out the Trump effect in the case of the US economy and also still pricing in a relatively hawkish ECB after Draghi's Sintra speech. Oil managed to continue with its bounce back from June's low levels following the news that Saudi Arabia pledged to reduce crude export in August. After the turbulent June in core market rates, July has managed to bring some relief both in the eurozone and in the US and investors saw some yield decrease on these markets. The above mentioned developments supported the hard currency EM debt instruments in July, this the asset class managed to post a good performance. During the month, the Fund has increased its exposure towards Polish govies, decreased its short position in 10-year Bund and took part in an EUR denominated issuance of PKO Bank.
