Currency:	HUF
Total Net Asset Value of the whole Fund:	207,558,694 PLN
Net Asset Value of HUF series:	4,040,825,239 HUF
Net Asset Value per unit:	1.475342 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey, although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	12.75 %
Annualized standard deviation of the benchmark's weekly yields:	12.50 %

MARKET SUMMARY:

Thanks to the better-than-expected macro data the main US equity indices bounced back after a weak start in August. While the European main equity indices finished slightly below their last month closing price, the BUX reached its absolute peak this month.

The British government seems to be more permissive in case of Brexit and is willing to pay 40 billion Euros to the EU budget, furthermore would accept the European Court's indirect jurisdiction in several cases after leaving the EU. Based on a survey in August, Macron's popularity is decreasing; more than 55 percent of the voters are not satisfied with his performance, while this number was just 43 percent in July.

August was a busy month in the United States. Donald Trump announced that an inquiry is started regarding the Chinese violation of intellectual property, the wall will be built on the Mexican border and no agreement will be reached in the NAFTA case (North American Free Trade Agreement). In addition, the president dissolved two advisory boards and dismissed his strategic senior advisor. It is still a question whether political consensus can be achieved in case of the tax reform and the debt limit. According to the minutes of the FED's summit, reduction of the balance sheet is about to start in September, but the decision-makers are still divided in the question of raising interest rate due to the fact that inflation is regarded in different ways. The North-Korean conflict increased in August because of the threat of a rocket attack against Guam; a new rocket was launched that hit the Pacific Ocean flying over Japan. As a result of the increasing geopolitical tension, investors become more risk-averse as a result, the price of gold reached a 10-month peak.

Along with gold, other precious metal's price went up to in August: silver reached its June rate, platinum its March rate and palladium its 2001 rate.

The oil price deteriorated in August due to the higher-than-planned OPEC output, the profit realisation and the lack of the oil demand because of hurricane Harvey.

The Norwegian national Fund is about to raise its weight of the equities, from 60 to 70 percent, becoming one of the most significant market participants of the global equity market.

On the Polish market, best performers were the oil & gas and energy sectors, while the food sector was the weakest in August. Thanks to a more moderate pension reform, the market was well performing. In the fund, the raw material and banking sectors are still overweighted while the oil sector is underweighted. The fund outperformed the benchmark this month and closed in the black.

ASSET ALLOCATION OF THE FUND ON 08/31/2017

Asset type	Weight
