Net Asset Value of HUF series:	1,326,745,846 HUF
Net Asset Value per unit:	1.899341 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

Risk and Reward Profile:

## MARKET SUMMARY:

Even though investors saw a somewhat higher volatility at beginning, this managed to subside and the VIX index sank below 10 once again. Renewed US tax reform discussions have supported another leg up in risk assets, with US equity indices making new highs while 10-year US treasury managed to spike by 20 basis points during the month thanks to a hawkish Fed rhetoric. The US currency managed also to strengthen on the back of tapering talks and the sealing of a December Fed hike. Energy prices rebounded, WTI hit 52 dollars/barrel while Brent also managed to spike to levels near 58 dollars/barrel. Thanks to BoE signalling an imminent rate hike as well as some progress around Brexit talks, Gilts underperformed other sovereign bond markets during the month. Bunds, Treasuries, Spanish bonds and BTPs all returned less than -1% in local currency. We sold some Spanish and US short term papers at the beginning of the month.

## ASSET ALLOCATION OF THE FUND ON 09/30/2017
