Total Net Asset Value of the whole Fund:	13,377,251,527 HUF
Net Asset Value of HUF series:	3,594,842,617 HUF
Net Asset Value per unit:	1.379777 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Positive market sentiment continued in the markets in September thus the American main equity indices reached an absolute peak and the German DAX and the French CAC 40 indices broke out from their decreasing trend channel.

In September, rhetorical conflict between the United States and North-Korea continued after the Phenjan regime exploded an underground hydrogen bomb at the beginning of the month. The experimental explosion has increased risk aversion somewhat but investors are getting used to this kind of news. The United Nations Security Council endorsed the tightening of the sanctions against North-Korea; first, the country's textile import has been banned, second, the oil import has been limited and Chinese banks began restricting the financial operations of North-Korean companies. The FOMC (Federal Open Market Committee) is about to start reducing its balance sheet by $ 10 billion in October. Despite the lower inflation rates, the market expects an interest rate rise in December. Donald Trump agreed with Congressional Democrats to raise the debt limit to 3 months, generating an internal conflict within the Republican Party.

Among the European Union member states, for the first time Austria issued a 100-year government bond this month. In the German parliamentary election, the CDU/CSU won by 32.8 percent which is lower than expected, while the anti-immigration and anti-euro AfD proved to be stronger and got 13 percent of the votes. First a "Jamaican" coalition is expected by the market, meaning CDU/CSU, FDP and Greens agreement. All of these have a neutral effect on the Euro, however the British could have more difficulties in dealing with Brexit.

In the middle of the month, S&P surprised the market expectations and upgraded the Portuguese government debt to the lowest grade of the investment category (BBB-), while China's long-term government debt was degraded to "A +". Because of the uncertainty of Brexit and deteriorating growth prospects, the British government debt was also degraded to "Aa2" by Moody's. As a result the British currency has plunged.

In September, oil price reached a 5-month peak due to the rumor of falling oil exports in the Kurdistan region, the rise in global oil demand and the decline in inventories.

In September, the European markets outperformed US markets thanks to the weakening Dollar. As a result of the improving technical picture, we are looking more optimistic on developed markets; although their pricing is expensive but EPS growth is more favourable. In September, we reduced the weight of the cyclical and durable consumer goods, while we raised the weight of the energy sector.

ASSET ALLOCATION OF THE FUND ON 09/30/2017

Asset type	Weight
