Currency:	HUF
Total Net Asset Value of the whole Fund:	4,811,944 EUR
Net Asset Value of HUF series:	1,000,705,131 HUF
Net Asset Value per unit:	1.250364 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign equities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. In order to achieve its aim, the fund can hold collective investment vehicles and ETFs in its portfolio. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

  very high

## MARKET SUMMARY:

Positive market sentiment continued on the stock exchanges; the main equity indices (S&P 500, DAX, Nikkei, BUX) reached an absolute peak in October with extreme low volatility. In addition, the third quarterly earnings season has begun thus company results also move the markets.

Overseas, the market is waiting for the details of the tax reform and the announcement of the Fed Chairman. It is expected that President Donald Trump will nominate Jerome Powell to the top job at the US central bank, expecting to pursue the current monetary policy. Thanks to the strong consumption and higher inventories the US economy grew by 3 per cent in the third quarter that is more than the expected 2.5%. As a result of the strong US macro data and the weaker Euro, the Euro has dropped to a three months low against the Dollar. Furthermore, the 10-year US bond was traded at 2.45 percent which is the highest number since March but yields started to decline by the end of the month.

At the beginning of the month, the Catalan independence referendum was in the limelight of the European market and the results led to a drop in the Spanish equities. The Spanish tension continued to intensify after the Catalan parliament voted to leave Spain which was replied by the Spanish Government by dissolution of the Catalan government and ordaining early elections in December. In the month, in line with the market consensus the European Central Bank did not change interest rates and announced a reduction in its bond purchase program from January 2018 to EUR 30 billion per month but did not set the date of completion of the program. After the news the Euro has significantly weakened. The European raw material sector reached its four-year peak as the core commodity prices rose and Citigroup has also upgraded the sector.

Oil prices also increased in October and hit 54.5 dollar per barrel as OPEC oil extraction quotas are expected to be prolonged and inventories decreased more than expected.

The fund closed in the black in October due to the good performance of all the sectors. The renewable energy sector was the best, followed by the utilities and waste indices, while the agricultural and the water were the weakest; however their positive yields also contributed to the fund's performance.

## ASSET ALLOCATION OF THE FUND ON 10/31/2017

Asset type	Weight
International equities	97.31 %
Current account	2.94 %
Liabilities	-0.21 %
Receivables	0.02 %
