Net Asset Value of HUF series:	25,834,186,787 HUF
Net Asset Value per unit:	2.737387 HUF

INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

MARKET SUMMARY:

November was a bit of a rollercoaster when it comes to risky assets. Volatility has spiked up somewhat in the middle of the month as there was a lot of noise around the HY market as a combination of macro factors along with some notable earnings misses have weighed on the market. Meanwhile some encouraging news flow emerged around the US tax bill. After the House passed its proposed tax bill it was next the Senate that had to agree on the form of tax relief and as we approached the month end, more statements came out that were constructive on the topic. The mending sentiment was also apparent in the performance of EM sovereign bonds. In our broad region, Turkey provided the main excitement as the Turkish lira continued its devaluation in November and went to an all-time high against the USD. The main question was that the central bank would change its stance and lift interest rates in order to protect the currency but the CBT did not drop the bomb. In light of this, our long TRY position had to be closed out. The equity exposure of the Fund was slightly increased in the month after the short selloff. A smaller position was also opened in Romanian government bonds. We saw a buying opportunity as yields significantly increased as a consequence of the deteriorating inflation outlook and the problem of twin deficit. However, the yield curve has seemingly priced in the monetary tightening already.

ASSET ALLOCATION OF THE FUND ON 11/30/2017
