Net Asset Value of HUF series:	2,518,085,779 HUF
Net Asset Value per unit:	1.684851 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

Overseas, the good sentiment continued on the stock exchanges in the last month of the year, thus the American main equity indices closed 2017 around their absolute peak prices. On the European market the picture was mixed, the markets of the Region could rise in the last month but the Western-European indices plunged somewhat in December. Overall, the equity markets closed a positive year, the emerging market index could rise by more than 34%, while the developed market index could also increase their value by more than 20%. The Dollar has weakened against the Euro in the last month of the year, even the successful voting of the tax reform could not help to the US currency, and thus the exchange rate broke through the crucial 1.2 level.

The US Dollar weakened by more than 14% against the Euro in 2017, the change in the Euro-Dollar trend was one of the most important trends in the foreign exchange market over the past year.

December was a busy month in the United States, in the first half of the month Donald Trump announced that he would like to acknowledge Jerusalem as the capital of Israel. In addition, in line with the expectations the FED increased the interest rate by 25 basis points, and the US tax reform has been voted successfully, it is the first significant political success of Donald Trump. In Europe, the Catalan situation continued to strain after the independence supporters gained an absolute majority in the parliamentary elections with 70 mandates. According to the news, the Italian parliamentary elections will be on March 4, this has led to a drop in the Italian assets. Based on a recent survey, 51% of the British people would vote for staying and only 41% would leave the EU. However, there was some good news in the European continent, the national debt of Portugal and Ireland has been upgraded, thus instead of BB+ Portugal has a rate BBB, which is already an investment category.

Oil prices also increased in the last month of the year and hit above 60 dollars per barrel due to the steadily declining oil supply. The price of the natural gas also rebounded this month, because a colder weather is waited in January in the United States.

In the last month of the year, the Indian, Hong Kong and Japanese markets closed in the black, but regarding the whole year the Chinese market significantly outperformed in the Asian market. We think that this trend will continue in 2018, thus we continue to prefer the Chinese market. Compared to developed markets, Asia outperformed in the last month of the year, but its performance lagged behind the emerging markets.
