Total Net Asset Value of the whole Fund:	4,237,348,975 HUF
Net Asset Value of TRY series:	2,128,369 TRY
Net Asset Value per unit:	1.881406 TRY

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	14.43 %
Annualized standard deviation of the benchmark's weekly yields:	16.43 %

MARKET SUMMARY:

Overseas, the good sentiment continued on the stock exchanges in the last month of the year, thus the American main equity indices closed 2017 around their absolute peak prices. On the European market the picture was mixed, the markets of the Region could rise in the last month but the Western-European indices plunged somewhat in December. Overall, the equity markets closed a positive year, the emerging market index could rise by more than 34%, while the developed market index could also increase their value by more than 20%. The Dollar has weakened against the Euro in the last month of the year, even the successful voting of the tax reform could not help to the US currency, and thus the exchange rate broke through the crucial 1.2 level.

The US Dollar weakened by more than 14% against the Euro in 2017, the change in the Euro-Dollar trend was one of the most important trends in the foreign exchange market over the past year.

December was a busy month in the United States, in the first half of the month Donald Trump announced that he would like to acknowledge Jerusalem as the capital of Israel. In addition, in line with the expectations the FED increased the interest rate by 25 basis points, and the US tax reform has been voted successfully, it is the first significant political success of Donald Trump. In Europe, the Catalan situation continued to strain after the independence supporters gained an absolute majority in the parliamentary elections with 70 mandates. According to the news, the Italian parliamentary elections will be on March 4, this has led to a drop in the Italian assets. Based on a recent survey, 51% of the British people would vote for staying and only 41% would leave the EU. However, there was some good news in the European continent, the national debt of Portugal and Ireland has been upgraded, thus instead of BB+ Portugal has a rate BBB, which is already an investment category.

Oil prices also increased in the last month of the year and hit above 60 dollars per barrel due to the steadily declining oil supply. The price of the natural gas also rebounded this month, because a colder weather is waited in January in the United States.

In December, the weakening of the Turkish lira stopped, and the market outperformed in the last month of the year. The previous pessimistic mood has weakened that was created by the violations of the Iran's sanctions. We think that the pricing of the shares is favourable and the corporate results are improving except in the banking sector where the results depend on whether credit expansion can continue, behind it there is a state loan guarantee fund.

ASSET ALLOCATION OF THE FUND ON 12/31/2017
