Net Asset Value of HUF series:	7,719,956,215 HUF
Net Asset Value per unit:	1.508831 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to create for its investors an investment portfolio that generates a positive yield under all circumstances; in other words, it takes a 'total return' approach. It does this by using various analysis techniques to select the asset classes and investment funds that have the greatest potential to appreciate in value, and by investing in the shares of investment funds and in collective investment securities. The fund primarily invests its capital in the funds managed by Aegon Hungary Investment Fund Management, but it may also purchase other investment funds and collective investment securities for its portfolio for the purpose of diversification, if the given asset class is not yet covered by the fund management company's own funds. Indirectly, the fund is capable of accessing the entire known investment universe of today through the purchase of investment fund shares (in bond markets, money markets, equity markets, property market, private equity, derivatives and other regulated and OTC derivative products, commodity-market products, currencies etc.), and of making its investments both at domestic and international level. To ensure liquidity, the fund may hold discount treasury bills and government bonds issued by the State Debt Management Centre (ÁKK), interest-bearing securities guaranteed by the State of Hungary, and bonds issued by the National Bank of Hungary. In order to achieve a positive yield, the fund makes active use of risk management procedures and carefully selects the position size of its riskier investments. Since the range of investments includes foreign currency-denominated investments, ETFs and investment fund shares, investors in the fund are also exposed to currency risk. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%, except AEGON Money Market Fund, AEGON Domestic Bond Fund, AEGON MoneyMaxx Express Fund, AEGON Alfa Derivative Fund, AEGON Central European Credit Fund and AEGON Ozon Capital Protected Fund.

Total:	100%

MARKET SUMMARY:

One of the most important trends in the past month was the further weakening of the Dollar against the Euro. At the beginning of the month, the exchange rate broke through the crucial 1.2 level, and after the ECB's interest rate meeting and Mario Draghi's press conference EURUSD hit over 1.25, which means a more than 3-year low for the American currency. The weakening of the dollar helped the emerging and the US markets, while the European stock markets were somewhat weaker in the last month because of the currency effect, however, at the end of the month the Dollar started to increase slightly, and profit realizers also arrived at the markets. The S&P 500 index has not suffered from a fall of more than 5 percent more than 395 days ago, thus the American stock market beat an other record, the last rise with the same low volatility was in the mid-nineties. The investor's good sentiment was not even broken by the US government shutdown, so as a result of the stronger corporate quarterly results and general market optimism, all the three main US equity indices rose to historic heights in January. The yield of the US ten-year government bond continued to rise this month, thus it hit over a four-year high level to 2.7 percent, at the end of the month it could bring profit realisation to the US equity market as well.

In January, in line with expectations the European Central Bank did not change the level of the interest rate, while there was a drop in the European exporter companies' price because of the stronger Euro. In Germany, SPD leader Martin Schulz has declared that it will not be a quick German coalition, as the parties could not agree on several issues. The oil price jumped to the 3-year high level, above 65 dollars per barrel, due to the extremely cold American weather, Iranian tensions, declining stock data, and the statement of the Saudi oil minister that the OPEC-Russia output reduction agreement should be extended after 2018. In January, the fund closed in the positive territory thanks to the good performance of the total return portfolios. Because of their higher relative weight, the Alfa and Maraton fund had a positive effect on the fund's performance, while the worst performance was achieved by the Domestic Bond Fund this month.

ASSET ALLOCATION OF THE FUND ON 01/31/2018
