Net Asset Value of CZK series:	320,594 CZK
Net Asset Value per unit:	1.068647 CZK

INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

MARKET SUMMARY:

At the beginning of February, the stock markets suffered their worst time since 2015. The selloff could have been catalyzed by the record inflows to the markets, the excessive stock market positioning and the accelerating rise in yields; but according to some experts, US wage statistics have also been involved because they saw an overheated labour market in the data.

The record amount of cash inflows turned around after the correction, causing a \$30.6 billion outflow from equity funds, which is the highest ever value.

In February, the US federal government stopped for a while again, after failing to vote for the necessary budget law in the Senate. The higher than expected inflation figures had no negative impact on the stock markets, but the probability of the interest rates hikes in March has increased to 83%. The 10-year US government yield reached 2.95 percent, thus the US yields rose to a new 4-year high.

At the beginning of the month, the Euro and the Forint were also at a three-year high against the Dollar but after a stronger US labour market data, the US currency began to pick up after unemployment figures reported that the overseas economy is in good shape which could influence the FED's interest rate hikes as well. Emanuel Macron's party lost two parliamentary interim elections this month; they lost more than half of last year's voters in both districts, so the decreasing popularity of the president has a negative impact on his party as well. In February, the German grand-coalition agreement was reached after the CDU/CSU made significant concessions to the SPD. Fitch upgraded the Greek debt by one degree from B- to B, while Russia received first S&P upgrade to BBB-, exiting the junk status.

Oil prices have fallen to a one-month lows as a result of the higher than expected supplies but after the Saudi oil minister's statement that they are producing significantly under the OPEC quota in the first quarter and due to the decreasing inventory data the oil prices have rebounded.

We managed to significantly reduce the weight of the equities before the correction. We currently hold Dollar, Polish Zloty and Romanian Leu exposures against the Forint, in addition we also entered into short positions to cover the fund's risk. Currently, the fund's tactic is waiting and looking for good entry points.

ASSET ALLOCATION OF THE FUND ON 02/28/2018
