Total Net Asset Value of the whole Fund:	16,273,751,299 HUF
Net Asset Value of institutional series:	12,788,161,182 HUF
Net Asset Value per unit:	1.487259 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

At the beginning of February, the stock markets suffered their worst time since 2015. The selloff could have been catalyzed by the record inflows to the markets, the excessive stock market positioning and the accelerating rise in yields; but according to some experts, US wage statistics have also been involved because they saw an overheated labour market in the data.

The record amount of cash inflows turned around after the correction, causing a \$30.6 billion outflow from equity funds, which is the highest ever value.

In February, the US federal government stopped for a while again, after failing to vote for the necessary budget law in the Senate. The higher than expected inflation figures had no negative impact on the stock markets, but the probability of the interest rates hikes in March has increased to 83%. The 10-year US government yield reached 2.95 percent, thus the US yields rose to a new 4-year high.

At the beginning of the month, the Euro and the Forint were also at a three-year high against the Dollar but after a stronger US labour market date, the US currency began to pick up after unemployment figures reported that the overseas economy is in good shape which could influence the FED's interest rate hikes as well. Emmanuel Macron's party lost two parliamentary interim elections this month; they lost more than half of last year's voters in both districts, so the decreasing popularity of the president has a negative impact on his party as well. In February, the German grand-coalition agreement was reached after the CDU/CSU made significant concessions to the SPD.

Fitch upgraded the Greek debt by one degree from B- to B, while Russia received first S&P upgrade to BBB-, exiting the junk status.

Oil prices have fallen to a one-month lows as a result of the higher than expected supplies but after the Saudi oil minister's statement that they are producing significantly under the OPEC quota in the first quarter and due to the decreasing inventory data the oil prices have rebounded.

In February, the developed markets minimally outperformed compared to the emerging markets, within the developed market Japan suffered the smallest, while Europe the biggest fall. In the fund, we hold slight overweight American exposure, which is mainly determined by individual equity positions.

ASSET ALLOCATION OF THE FUND ON 02/28/2018

Asset type	Weight
Collective securities	70.03 %
International equities	28.12 %
