Start:	01/05/2017
Currency:	USD
Total Net Asset Value of the whole Fund:	8,905,876 EUR
Net Asset Value of USD series:	104,538 USD
Net Asset Value per unit:	1.045381 USD

INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with capital appreciation by investing in the sovereign- and quasi-sovereign bond market of Emerging European countries. The fund has no rating constraints, the fund has a permission to invest in any kind of issuer without limitation on its long-term foreign currency debt rating. The fund aims to reach the highest capital gain with rational risk taking. The fund primarily invests on the sovereign- and quasi-sovereign bond market of Emerging European countries denominated in foreign currency, but holds Hungarian local currency, long- and short-term bonds with diversification and liquidity management purposes. The fund may also invest in mortgage backed securities, and short- and long-term, fixed or floating securities of other financial institutions, municipalities or other business corporations, structured and convertible bonds. The fund's general risk level and the measure of the deviation from the target weights are determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The core part of the fund consists of the foreign currency denominated, sovereign and quasi-sovereign bonds of Central and Eastern Europe (Hungary, Croatia, Poland, Romania, Slovakia, Ukraine), Southeast Europe (Serbia, Turkey), Baltic states (Lithuania, Latvia) and the countries of the Commonwealth of Independent States (Azerbaijan, Belarus, Kazakhstan, Russia, Georgia, Armenia) and also holds Hungarian local currency bonds with diversification and liquidity management purposes. In case of attractive market conditions (e.g. possible upgrade of an issuer's long-term foreign currency debt rating, change of the yield curve, market mispricing, etc.) the fund may invest in bonds of issuers not listed above. The fund does not intend to invest more than 25% of its assets in a single country. The target weight for the fund's fixed income investments in the above listed countries (target countries) is 95%. The aimed risk profile of the fund is intermediate. We do not use constraints on foreign currency debt ratings. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged debt-type collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged to the target currency (USD), although depending on market circumstances the fund may even have an open currency position. The investment policy of the fund changed on the 30th of December, 2016. Since then the fund has no benchmark, and fund performance before the change is not applicable.

MARKET SUMMARY:

March proved to be another rough month for global risk assets, with equity markets in particular feeling the brunt of the selling. The tit-for-tat tariff moves between the US and China, the ongoing reshuffle at the White House, a tech tantrum centred on Facebook but spreading across the rest of the sector and signs of abating global growth following the March PMIs all played a part in one way or another. Volatility also remained high in March after February's exceptional swing. The Fed hiked policy rates by 25bp in March. New projections signalled two more hikes this year, and a total of three for 2019, from two in its previous forecast. Market took the projections and the comments from the new chair, Jerome Powell a bit more dovishly and US treasury bonds managed to decrease in yield after the announcement. Even though this way some pressure has eased on emerging market bonds, the overall anxious investment mood had an overall negative effect on the asset class. EM sovereign bond yield spreads have widened by 18 basispoints overall in the month on the back of the somewhat negative sentiment. The fact that outflows returned to the asset class did not help the overall fragile situation. The overall risk in the fund remained unchanged, we still refrain for taking on excessive risk in the fund.

ASSET ALLOCATION OF THE FUND ON 03/31/2018
