Net Asset Value of HUF series:	1,221,796,600 HUF
Net Asset Value per unit:	1.870051 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

Risk and Reward Profile:

## MARKET SUMMARY:

The growth outlook remains broadly supportive with strong and broad-based growth to continue globally, with limited impact on inflationary pressures, allowing for a very gradual normalisation of monetary policy in core economies. Sentiment remains positive and at high levels, despite the modest declines seen in manufacturing the last couple of months. However, the bears are coming after Goldilocks. Global equities fell in March, amid increasing concerns over global trade protectionism following US President Trump's announcements of tariffs on imports. Meanwhile, investor risk aversion boosted longer-dated DM government bonds, with 10-year Treasury yields declining by 12bp to 2.74%. Policy-sensitive two-year Treasury yields rose slightly, however, as the Fed raised interest rates at their March meeting. Finally, oil prices reversed the bulk of losses seen in February, with WTI crude up 5.4% over the month. One source of support was a slightly weaker US dollar. We opened a short position in German medium-term government bonds.

## ASSET ALLOCATION OF THE FUND ON 03/31/2018

Asset type	Weight
