INVESTMENT POLICY OF THE FUND:

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, Poland, the Czech Republic, Romania, Slovenia and Croatia, and secondarily, Austria, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

At the beginning of April, the US market hit a new low this year, the so-called 3T ("Trade-war, Trump and the sustainability of the Technology sector's pricing") was in the limelight of the investors but overall the US equity market could rise somewhat by the end of the month, while the European equity market managed to increase its value by 5%.

Numerous geopolitical tensions emerged and intensified in the last month. China and America continued to deal with trade war, America has launched a rocket attack in Syria to destroy chemical weapons capacities and the markets have been observed by the possible US termination of the Iranian nuclear agreement as well. In addition, in April, the United States announced new sanctions against Russia after the Americans presumed that the Russians had influenced the outcome of the 2016 election. The sanctions were directed against Russian oligarchs, large corporations and politicians but mostly Oleg Gyeripaszka, billionaire's interests were hit. As a result of the news, the Russian index suffered a drop of more than 10% in one day but investors also sold European stocks with significant Russian exposure. By the end of the month, the Russian market managed to rebound somewhat in accordance with the easing of the sanctions but the Rubel suffered a significant weakening against the Dollar.

In April, the Dollar appreciated against the Euro as well and the EURUSD cross managed to break out from its flat trend channel. The strengthening was explained by the Dollar's significant interest advantage, by the monetary policy divergence and the emerged euro-long positioning. In addition, the US 10-year yield reached a 5-year high and an important psychological level, the 3% thus yielding growth could also boost the US currency.

The oil prices managed to hit a 4-year high in April, after the investors priced the possible US termination of the Iranian nuclear agreement and the OPEC's (Organization of the Petroleum Exporting Countries) oil-mining has fallen to a yearly low.

In the region, the best performance was achieved by the Austrian market, followed by the Czech, Polish and Hungarian markets. By the end of the month, the Romanian equity market lost momentum and closed April at flat. During the month, we increased our exposure in OMV and Waberer's papers, currently in the fund the Romanian equity market is overweighted, while we hold the other regional markets at their long-term-target weight, the fund focuses on the growth of the banking sector and the real estate sector.
