Start:	10/29/2007
Currency:	EUR
Total Net Asset Value of the whole Fund:	2,860,926,244 HUF
Net Asset Value of EUR series:	312,776 EUR
Net Asset Value per unit:	1.372678 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

However, the US equity market managed to rise in May, the European and Regional equity indices suffered a fall. The Dollar was able to strengthen significantly against the Euro, thus the EURUSD cross reached the 1.151 rate. At the beginning of the month, the US currency was boosted by the record high US export data, while the European geopolitical tension and the widening US-German yield gap have put pressure on the Euro, after the 10-year US government yield hit a 7-year-high and reached the 3.1 level.

Last month, the fears of some vulnerable emerging markets' currency crisis come to the light. In May, the Argentine peso weakened by more than 20 percent in one week compared to the Dollar. At the beginning of the month, the foreign exchange intervention did not bring the expected result, thus the local central bank had to raise the base rate to 40% to reduce the pressure on the Argentine currency. Moreover, the Argentine President Macri had to request for an IMF help to save the Peso. Similar situation took place in Turkey in May, the Turkish Lira fell to a new absolute low against the Dollar, which only the local central bank was able to curb somewhat by an extra 300 basis point interest rates raise. The fears of the emerging market currencies also reached Hungary, thus the Forint has weakened over the 320 limit against the Euro, which has not been seen since June 2016.

In Europe, the Italian political tensions were in the limelight. At the end of the month, State-President Mattarella did not endorse Giuseppe Conte's Financial Minister nominee, the euro-skeptic Paolo Savona, in response to this, the League and the Five Star Movement have given back the mandate of the government formation. Investors were afraid that Italy will leave the Eurozone, thus the Italian 10-year government yield has jumped to levels not seen since 2014.

Overseas, Trump's politics was a real roller coaster. In May, the US president declared that the US will officially quit the nuclear agreement with Iran, which the European countries are trying to maintain. Variable news came on the US-China trade war front as well, in the middle of the month we could hear some news about a cease-fire but by the end of the month, another tariff increase was announced. Similar situation took place in connection with the US-North-Korean summit (planned on June 12), the US president firstly resigned the meeting but by the end of the month, some good news emerged about this issue.

Oil price hit a new 3.5-year high in May, after the market participants worried about a significant downturn in Iran's oil supply, but the end of the month, the investors realized profit before the OPEC/Russian production negotiation.

Within the Asian markets, the best performance was achieved by the Chinese, Hong-Kong and Taiwan markets (in Forint terms), while the Indian and Korean markets proved to be the weakest last month. In the fund, we hold Japanese overweighted and Indian underweighted positions, which allocation had a little negative impact on the fund's last month's performance.

ASSET ALLOCATION OF THE FUND ON 05/31/2018

Asset type	Weight
Collective securities	94.95 %
Current account	4.57 %
