Total Net Asset Value of the whole Fund:	2,896,571,103 HUF
Net Asset Value of USD series:	259,756 USD
Net Asset Value per unit:	0.834743 USD

### INVESTMENT POLICY OF THE FUND:

The fund's aim is to earn capital gains by taking positions in a wide range of assets while keeping risk under pre-defined limits. The assets are selected based on fundamental and technical criteria from the widest range of industry and country exposures possible. Based on medium and long-term trends, the fund can buy or sell equities, bonds and other securities, and take various exposures using exchange (futures, options) and OTC derivatives (IRS and currency forwards). Naked shorts on securities are not allowed. The manager selects and builds positions based on fundamental and technical analysis in such a way, that the fund's return can exceed that of bank deposits over a medium-term horizon. Equally important focus is given to risk management which targets Level 5 risk bracket. The fund is not targeting any specific sectors, countries or asset classes, but most of its exposures will be taken on US and European exchanges, or markets regulated by the capital market authorities of the United States of America and the countries of the European Union. The fund's net corrected risk exposure may go up to 200 percent of the portfolio, in accordance with the Hungarian capital market acts and regulations. The fund can also run a net short exposure, also in accordance with the above mentioned regulatory limits.

### MARKET SUMMARY:

However, the US equity market managed to rise in May, the European and Regional equity indices suffered a fall. The Dollar was able to strengthen significantly against the Euro, thus the EURUSD cross reached the 1.151 rate. At the beginning of the month, the US currency was boosted by the record high US export data, while the European geopolitical tension and the widening US-German yield gap have put pressure on the Euro, after the 10-year US government yield hit a 7-year-high and reached the 3.1 level. Last month, the fears of some vulnerable emerging markets' currency crisis come to the light. In May, the Argentine peso weakened by more than 20 percent in one week compared to the Dollar. At the beginning of the month, the foreign exchange intervention did not bring the expected result, thus the local central bank had to raise the base rate to 40% to reduce the pressure on the Argentine currency. Moreover, the Argentine President Macri had to request for an IMF help to save the Peso. Similar situation took place in Turkey in May, the Turkish Lira fell to a new absolute low against the Dollar, which only the local central bank was able to curb somewhat by an extra 300 basis point interest rates raise. The fears of the emerging market currencies also reached Hungary, thus the Forint has weakened over the 320 limit against the Euro, which has not been seen since June 2016.

In Europe, the Italian political tensions were in the limelight. At the end of the month, State-President Mattarella did not endorse Giuseppe Conte's Financial Minister nominee, the euro-skeptic Paolo Savona, in response to this, the League and the Five Star Movement have gave back the mandate of the government formation. Investors were afraid that Italy will leave the Eurozone, thus the Italian 10-year government yield has jumped to levels not seen since 2014.

Overseas, Trump's politics was a real roller coaster. In May, the US president declared that the US will officially quit the nuclear agreement with Iran, which the European countries are trying to maintain. Variable news came on the US-China trade war front as well, in the middle of the month we could hear some news about a cease-fire but by the end of the month, another tariff increase was announced. Similar situation took place in connection with the US-North-Korean summit (planned on June 12), the US president firstly resigned the meeting but by the end of the month, some good news emerged about this issue.

Oil price hit a new 3.5-year high in May, after the market participants worried about a significant downturn in Iran's oil supply, but the end of the month, the investors realized profit before the OPEC/Russian production negotiation.

In May, we closed our long position on the US equity market and lowered our Russian stock market exposure. At the beginning of the month, we entered into long position in the Polish Videogame publisher company (PlayWay), while by the end of the month, we opened long position in the Graphisoft park and in the Regional banking sector. Regarding the fund's fixed income exposure, the Romanian and Croatian Euro dominated papers were sold. Currently we also hold foreign exchange positions for the strengthening of the Regional currencies against the developed market currencies.
