Net Asset Value of EUR series:	300,810 EUR
Net Asset Value per unit:	1.319081 EUR

INVESTMENT POLICY OF THE FUND

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in order words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

The power of the world's stock exchanges was unsteady in June but the intensifying tension in connection with the trade war put pressure on the performances; the US and the European equity markets closed nearly at flat, while the emerging markets suffered a fall.

The actions of trade war jumped to a higher level in June. Trump has approved a tariff package of \$50 billion against Chinese products, of which \$34 billion worth of Chinese goods will enter into force on July 6. In addition, the US president has threatened China with an other possible tariff on \$200 billion Chinese goods, which can be replied with a stricter response by China. At the same time, there were actions on the European front as well. The European Commission has sent a document to the US Department of Commerce that if Trump targets the automakers, the EU will introduce new tariff against the US export worth \$300 billion.

The G7 Summit did not bring any substantial progress either, moreover at the end of the meeting, Trump said that the US will not sign the G7 statement on the reduction of customs duties, thus the risks of the global multilateral trading system did not end.

In June, historic meeting was held between Kim Jong Un and Donald Trump in Singapore, which was sealed by a joint declaration; Phenjan undertook a complete abolition of the Korean atom program, while Washington offered a security guarantee to his old enemy.

In line with expectations, the FED has carried out a 25-basis point interest rate hike last month and has published about four tightening for this year, which caused a fall in the US equity market.

In June, the European Central Bank also decided on a two-step downturn in its Asset Purchase Program, they will continue the program at the current monthly pace of 30 billion Euros until the end of September, then it will be reduced to 15 billion until the end of December, when the net purchases will end.

The leaders of the EU Member States held also a Summit this month, where the migration agreement was reached, which caused Euro strengthening by more than 1%, but by the end of the month, the EURUSD cross exchange rate closed at flat.

However, the Forint did not have a favourable month, it lost value significantly against the Dollar and weakened to a historic low against the Euro; at the end of the month the exchange rate hit the 330 level as well.

Oil prices have also risen sharply In June, supported by the inventory data and the news that the US wants to decrease the Iranian oil import to zero from November, moreover Trump has announced that who did not comply with it, would be penalized by financial sanctions.

The Asian markets outperformed last month compared to the emerging markets; the best performance was achieved by the Indian and Taiwan markets in Dollar terms, followed by the Japanese market. The Korean and the Chinese market lost the most in June, mainly due to the strengthening yuan that started from the middle of the month. Currently, in the fund the Japanese market is overweighted, while we hold slight underweighted positions in the other Asian markets
