Currency:	EUR
Total Net Asset Value of the whole Fund:	4,155,606 EUR
Net Asset Value of EUR series:	1,180,830 EUR
Net Asset Value per unit:	0.009292 EUR

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign equities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. In order to achieve its aim, the fund can hold collective investment vehicles and ETFs in its portfolio. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

## MARKET SUMMARY:

The power of the world's stock exchanges was unsteady in June but the intensifying tension in connection with the trade war put pressure on the performances; the US and the European equity markets closed nearly at flat, while the emerging markets suffered a fall. The actions of trade war jumped to a higher level in June. Trump has approved a tariff package of \$50 billion against Chinese products, of which \$34 billion worth of Chinese goods will enter into force on July 6. In addition, the US president has threatened China with an other possible tariff on \$200 billion Chinese goods, which can be replied with a stricter response by China. At the same time, there were actions on the European front as well. The European Commission has sent a document to the US Department of Commerce that if Trump targets the automakers, the EU will introduce new tariff against the US export worth \$300 billion. The G7 Summit did not bring any substantial progress either, moreover at the end of the meeting, Trump said that the US will not sign the G7 statement on the reduction of customs duties, thus the risks of the global multilateral trading system did not end. In June, historic meeting was held between Kim Jong Un and Donald Trump in Singapore, which was sealed by a joint declaration; Phejnan undertook a complete abolition of the Korean atom program, while Washington offered a security guarantee to his old enemy. In line with expectations, the FED has carried out a 25-basis point interest rate hike last month and has published about four tightening for this year, which caused a fall in the US equity market. In June, the European Central Bank also decided on a two-step downturn in its Asset Purchase Program they will continue the program at the current monthly pace of 30 billion Euros until the end of September, then it will be reduced to 15 billion until the end of December, when the net purchases will end. The leaders of the EU Member States held also a Summit this month, where the migration agreement was reached, which caused Euro strengthening by more than 1%, but by the end of the month, the EURUSD cross exchange rate closed at flat. However, the Forint did not have a favourable month, it lost value significantly against the Dollar and weakened to a historic low against the Euro; at the end of the month the exchange rate hit the 330 level as well. Oil prices have also risen sharply In June, supported by the inventory data and the news that the US wants to decrease the Iranian oil import to zero from November, moreover Trump has announced that who did not comply with it, would be penalized by financial sanctions. The fund closed the month in the red, due the fall of the waste, water, renewable and agricultural indices. Although the utility sector rose in June but this could not compensate the weaker performance of the other sectors.
