Net Asset Value of HUF series:	2,246,027,193 HUF
Net Asset Value per unit:	2.352684 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

Annualized standard deviation of the benchmark's weekly yields: 19.99 %

MARKET SUMMARY:

The power of the world's stock exchanges was unsteady in June but the intensifying tension in connection with the trade war put pressure on the performances; the US and the European equity markets closed nearly at flat, while the emerging markets suffered a fall.

The actions of trade war jumped to a higher level in June. Trump has approved a tariff package of \$50 billion against Chinese products, of which \$34 billion worth of Chinese goods will enter into force on July 6. In addition, the US president has threatened China with an other possible tariff on \$200 billion Chinese goods, which can be replied with a stricter response by China. At the same time, there were actions on the European front as well. The European Commission has sent a document to the US Department of Commerce that if Trump targets the automakers, the EU will introduce new tariff against the US export worth \$300 billion.

The G7 Summit did not bring any substantial progress either, moreover at the end of the meeting, Trump said that the US will not sign the G7 statement on the reduction of customs duties, thus the risks of the global multilateral trading system did not end.

In June, historic meeting was held between Kim Jong Un and Donald Trump in Singapore, which was sealed by a joint declaration; Phenjan undertook a complete abolition of the Korean atom program, while Washington offered a security guarantee to his old enemy.

In line with expectations, the FED has carried out a 25-basis point interest rate hike last month and has published about four tightening for this year, which caused a fall in the US equity market.

In June, the European Central Bank also decided on a two-step downturn in its Asset Purchase Program, they will continue the program at the current monthly pace of 30 billion Euros until the end of September, then it will be reduced to 15 billion until the end of December, when the net purchases will end.

The leaders of the EU Member States held also a Summit this month, where the migration agreement was reached, which caused Euro strengthening by more than 1%, but by the end of the month, the EURUSD cross exchange rate closed at flat.

However, the Forint did not have a favourable month, it lost value significantly against the Dollar and weakened to a historic low against the Euro; at the end of the month the exchange rate hit the 330 level as well.

Oil prices have also risen sharply In June, supported by the inventory data and the news that the US wants to decrease the Iranian oil import to zero from November, moreover Trump has announced that who did not comply with it, would be penalized by financial sanctions.

The Russian market outperformed compared to the emerging markets last month, thanks to the OPEC agreement and the strong oil prices due to the potential Iranian output downturn.

In June, the Ruble was stable against the Dollar, while the weak performance of the Forint contributed positively to last month's good performance. During the month, we cut back the weight of the equities, and we focused mostly on the dividend-paying equities, while we also held slightly underweighted positions in the banking sector.

ASSET ALLOCATION OF THE FUND ON 06/30/2018
