Net Asset Value of HUF series:	19,943,141,811 HUF
Net Asset Value per unit:	2.648410 HUF

INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	1.84 %
Annualized standard deviation of the benchmark's weekly yields:	0.14 %

MARKET SUMMARY:

July has proven to be a fairly decent month for risky assets with the only laggard being commodities. This partly reflected the demand-supply dynamic in oil, while the lack of any easing in the US-China trade war saw metals fall. The trade situation also played a part in the Chinese Yuan weakening. As the emerging market currencies managed to stabilize against the USD after many months of weakening, EM bonds also had a decent performance in July. Thanks to the somewhat improved sentiment capital outflows have turned and we saw some slight inflow into the asset class. Within Europe Ukraine saw the most improvement as favourable news came out regarding the amendments of the anti-corruption court law that is a prerequisite for the next tranche of the IMF money. The main underperformer in the region was Turkey as the new appointments in the cabinet was something that the market handled with concern as while the independence of monetary policy amid high inflation is still not secured.

ASSET ALLOCATION OF THE FUND ON 07/31/2018
