Total Net Asset Value of the whole Fund:	1,168,736,716 HUF
Net Asset Value of HUF series:	1,168,736,716 HUF
Net Asset Value per unit:	1.924116 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

Risk and Reward Profile:

## MARKET SUMMARY:

July delivered the strongest month for global markets since January, triggered by the most impressive earnings season in years plus China's monetary/fiscal easing. Flash PMs last week were mixed but consistent with solid expansion, even if the internals (future output, new orders) still show the imprint from trade conflict. US-EU ceasefire on trade reduces one downside risk for region. DM Equities have returned 3-4% last month compared to 5.5% in January and US and Euro credit spread tightening is matching January's, all aided by record-strong US earnings (about 90% of companies are beating expectations). EM assets are higher too, but all except EM Credit are lagging DM markets. MSCI EM is up just 2% this month and EM FX (JPMs EMCI) up 1%, boosted by China stimulus announcements but mindful of President Trump's outstanding trade threats on China and global autos. It isn't obvious that last week's ceasefire in the US-EU trade war has a positive read-across to China. To the contrary, these two are more likely recognizing common cause in containing and confronting China as part of the long game. We decreased our exposure to the U.K. government bonds whilst doubled long position in the long-term U.K. government bonds, cut in twice long position in Italian government bonds as well as opened short position in the medium-term German government papers.

## ASSET ALLOCATION OF THE FUND ON 07/31/2018
