 Start: 10/29/2007  
 Currency: EUR  
 Total Net Asset Value of the whole Fund: 2,926,695,817 HUF  
 Net Asset Value of EUR series: 357,362 EUR  
 Net Asset Value per unit: 1.313488 EUR

## INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

## MARKET SUMMARY:

In September, major equity indices did not show any significant change, emerging markets performed similarly to their developed counterparts but Japan proved to be an outperformer. In the beginning of the month, the sentiment around the trade war became better thanks to the news about the new negotiation between China and America but in the middle of the month, Donald Trump hit China with tariffs on another \$200 billion worth of Chinese goods with 10% duty, that will increase to 25% at the start of 2019. In response to that, China has cancelled all trade negotiations with America thus the trade war tensions continued to increase in September.

September was also rich in central bank pulses. The Bank of England and the European Central Bank have not changed the monetary policy conditions as expected but the Turkish central bank has raised its key interest rate to 24% in a dramatic bid from 17.5% to control inflation and prevent a currency crisis. Following the decision, the Turkish lira started to rise and the Turkish equities closed the month in the black. The Federal Reserve has raised US short term interest rate by 25 basis points to 2-2.25 per cent and further strengthened the chance of another tightening in December, the market gives 85% probability for the next interest rate hike this year.

Until end of September, Italian assets could rise and the Italian yield spreads fell which caused rise in the banking sector. However, by the end of the month the Italy's coalition government agreed on a 2019 deficit at 2.4 percent of GDP compared to the EU's preferred level of less than 2 percent, which caused a significant drop in the Italian risky assets while the Italian 10 year government bond hit 3.4 per cent with almost a 20% increase.

In September the oil could also increase its price, the oil market is currently characterised by constriction of the supply-side: in addition to the expected impact of Iranian sanctions, US oil reserves have significantly fallen while the hurricane Florence has also supported the price of the black gold.

The fund significantly outperformed in September due to the restructuring in the previous month. Within the Asian markets, the best performance was achieved by the Japanese equities, while the Indian market suffered a significant loss. After we are more optimistic about the developed markets, we held a heavy Japanese overweight, moreover the Indian pricing was considered too excessive, thus we set an underweight in Indian stocks.

## ASSET ALLOCATION OF THE FUND ON 09/30/2018

Asset type	Weight
Collective securities	93.53 %
Current account	6.33 %
Receivables	0.36 %
