Currency:	USD
Total Net Asset Value of the whole Fund:	8,321,165 EUR
Net Asset Value of USD series:	104,082 USD
Net Asset Value per unit:	1.040816 USD

INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with capital appreciation by investing in the sovereign- and quasi-sovereign bond market of Emerging European countries. The fund has no rating constraints, the fund has a permission to invest in any kind of issuer without limitation on its long-term foreign currency debt rating. The fund aims to reach the highest capital gain with rational risk taking. The fund primarily invests on the sovereign- and quasi-sovereign bond market of Emerging European countries denominated in foreign currency, but holds Hungarian local currency, long- and short-term bonds with diversification and liquidity management purposes. The fund may also invest in mortgage backed securities, and short- and long-term, fixed or floating securities of other financial institutions, municipalities or other business corporations, structured and convertible bonds. The fund's general risk level and the measure of the deviation from the target weights are determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The core part of the fund consists of the foreign currency denominated, sovereign and quasi-sovereign bonds of Central and Eastern Europe (Hungary, Croatia, Poland, Romania, Slovakia, Ukraine), Southeast Europe (Serbia, Turkey), Baltic states (Lithuania, Latvia) and the countries of the Commonwealth of Independent States (Azerbaijan, Belarus, Kazakhstan, Russia, Georgia, Armenia) and also holds Hungarian local currency bonds with diversification and liquidity management purposes. In case of attractive market conditions (e.g. possible upgrade of an issuer's long-term foreign currency debt rating, change of the yield curve, market mispricing, etc.) the fund may invest in bonds of issuers not listed above. The fund does not intend to invest more than 25% of its assets in a single country. The target weight for the fund's fixed income investments in the above listed countries (target countries) is 95%. The aimed risk profile of the fund is intermediate. We do not use constraints on foreign currency debt ratings. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged debt-type collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged to the target currency (USD), although depending on market circumstances the fund may even have an open currency position. The investment policy of the fund changed on the 30th of December, 2016. Since then the fund has no benchmark, and fund performance before the change is not applicable.

MARKET SUMMARY:

Emerging markets had a difficult month and the situation is unlikely to improve in the last quarter of the year. The danger of trade wars is affecting global trade, on which most EM depend. While the US administration seems to focus on trade tariffs on China, other EM are not immune to spillover. Tighter USD funding conditions, increasing trade tensions and idiosyncratic issues in a number of important EM countries have taken a toll on EM capital flows, reflected in currencies and asset price valuations. Pressures on their currencies have forced many EM central banks to tighten monetary policy, weighing further on their growth prospects, especially when compared with the robust economic momentum in DM. After protracted negotiations and changes in the Central Bank leadership, the IMF and Argentina unveiled a new program last month. IMF financial assistance diminishes the probability of a credit event over the next year. Despite the Turkey Central Bank's strong policy response (in the form of a 625bp rate hike) on September 20 and announcement of the government's the long-awaited medium-term program (New Economic Program or NEP), Turkey remains another weak point in the EM universe while spreads tightened by more than 100bps in September.
