Total Net Asset Value of the whole Fund:	2,700,806,301 HUF
Net Asset Value of EUR series:	330,551 EUR
Net Asset Value per unit:	1.214943 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

At the beginning of October, America and Canada managed to come to an agreement about the NAFTA which even gave a positive boost to the market thus the American main equity indices managed to hit a new absolute peak. However, in the middle of the month, the deteriorating technical picture, rising US yields, weak new home sales data and fears of slowing down global growth triggered significant drops in the markets that had not been seen since February. The fall was suffered mainly by the market leader equities thus significant profit taking were made in the US technology sector where these papers has not reported such a fall in a single day since August 2011. The Chinese spying case also caused tension in the markets; according to the news Chinese spies have placed chips in the assets of more than 30 companies (including US agencies) which allows secret access to internal networks. This has further intensified the tension between America and China and we believe that this case may have further negative impacts on the future. In addition, according to Bloomberg's information, Trump plans to impose tariff on Chinese good worth \$257 billion, if they can not reach a common agreement at the meeting with the Chinese President, Xi Jinping in November. This statement was attributed by the market to the negotiating style of the US president and to the midterm elections in 6th of November but by the end of the month, the US President spoke of the negotiations in high terms. European stocks also fell sharply last month, partly because of the global stock market correction and on the other hand, the further rise in Italian yield spreads and the growing fears of Brexit put pressure on the markets. The Euro also weakened against the dollar last month; at the end of October, the EURUSD pair fell down to the level of 1.13.

The oil price also closed in the red last month; although, at the beginning of October, it was still close to 4 years highs but by the end of the month it fell by more than 15%. The fall has been attributed to the profit takings, possible growth in Saudi production, the negative impact on the oil demand caused by the trade war and the news that America has granted a temporary, 180-day exemption from the sale ban to eight buyers (8 countries) of Iranian oil. Emerging markets were under serious pressure from sellers during October thus they underperformed compared to the Developed markets. Within the Asian market, India and Japan were able to outperform this month in Dollar terms, while the Korean and Chinese markets fell the most. The fund exceeded its benchmark index thanks to the overweight in the Japanese market and the underweighted strategy in the Chinese equities.

ASSET ALLOCATION OF THE FUND ON 10/31/2018

Asset type	Weight
Collective securities	93.74 %
Current account	6.78 %
