Total Net Asset Value of the whole Fund:	1,165,636,881 HUF
Net Asset Value of HUF series:	1,165,636,881 HUF
Net Asset Value per unit:	1.949804 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

MARKET SUMMARY:

Recently revealed survey indicators of global activity signal a fairly coherent message about global trade - the slow down is accelerating. In the US, Asia and Europe, the export orders component of PMIs came in weaker than expected and signalled even weaker export demand than in previous months. At the source of these weak data is the deceleration in Chinese activity on the back of the ongoing trade war between the US and China. In Europe, October's data releases were surprisingly weak, and it is expected some of that weakness to carry over into the months ahead. Activity in the third quarter was weaker than expected, with GDP growth at 0.2% QoQ, below our expectation of 0.3% QoQ and the Bloomberg consensus forecast of 0.4% QoQ. Global bonds spreads has been moving wider in October despite the supportive technical and abating idiosyncratic developments. Global asset sell-off is partially to blame. US treasuries moved higher on the back of hawkish Fed, this combined with a mixed earnings season, pushes equities lower, VIX higher and spreads widen. Last month, the flow exodus picked up again. Both IG and HY funds recorded large outflows, the largest since mid-Feb for high-yield. Only credit funds, government bond funds and commodities funds experienced inflows last week of October, though to a marginal extent. Market participants continue to suspect that European retail money is leaking to the front-end of the US money market curve, where rates of return on "cash" are now very appealing. We increased long position in the German medium-term government bonds.

ASSET ALLOCATION OF THE FUND ON 10/31/2018
