Net Asset Value of HUF series:	2,638,156,965 HUF
Net Asset Value per unit:	1.569535 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in order words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

The stock markets suffered significant losses in the last month of the year; such a decline in December was not seen since the Great Depression of the 1930s. Regarding the whole year of 2018, the main equity indices suffered their worst year in a decade, while the Hungarian equity market managed to close at flat.

At the beginning of December, the US yield curve was inverted for the first time since 2007, namely the two-year and the five-year yield spread dropped below zero. As a result of this, the investors feel that the next recession can be closer than we think; the reverse yield curve was previously a good sign of the coming recession in most cases. However, based on the CNBC information, this was the root cause of the correction in early December after the US Hedge Funds and their trading robots could be activated because of the inversion. The remainder of December was also characterized by very high volatility.

The European equities fell to a two-year low with such a high daily loss that was not seen since the Brexit vote. At the end of the month, the US equity market managed to rebound with an unprecedented daily rise (5%), thus the US equities closed the year with a nearly 7% drop but not at annual low. In addition to the deteriorating technical picture, the fall was accompanied by a further increase in trade-war tension after the Huawei's Chief Financial Officer was arrested in Canada on US request. Moreover, in line with the official expectations, the FED raised the target base rate with 25 basis points, bringing additional sellers to the markets.

We received new important impulses from Europe as well. The Italian market has outperformed the developed markets after the European Commission has approved the new Italian 2019 budget plan, which estimates a 2.04 percent deficit target. In addition, Theresa May managed to survive the vote of no confidence but the fact that 117 Members voted against her questions whether the Brexit agreement can pass through the British parliamentary vote.

As a result of the fall of the world's stock exchanges, the fund also suffered a loss in the last month of the year but the emerging markets managed to outperform their Developed counterparts. Within the Asian market, the best performance was achieved by the Indian, Hong-Kong and Taiwanese equities (meaning that the closed nearly at flat), while the Chinese and Japanese markets suffered significant losses. In December, we entered into long Chinese exposure as we are more optimistic on the Emerging market assets with the improvement of the technical picture and the more attractive pricing.

ASSET ALLOCATION OF THE FUND ON 12/31/2018
