Total Net Asset Value of the whole Fund:	4,178,560,791 HUF
Net Asset Value of HUF series:	1,926,507,201 HUF
Net Asset Value per unit:	1.403362 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 43.97 %

Annualized standard deviation of the benchmark's weekly yields: 40.65 %

MARKET SUMMARY:

The stock markets suffered significant losses in the last month of the year; such a decline in December was not seen since the Great Depression of the 1930s. Regarding the whole year of 2018, the main equity indices suffered their worst year in a decade, while the Hungarian equity market managed to close at flat.

At the beginning of December, the US yield curve was inverted for the first time since 2007, namely the two-year and the five-year yield spread dropped below zero. As a result of this, the investors feel that the next recession can be closer than we think; the reverse yield curve was previously a good sign of the coming recession in most cases. However, based on the CNBC information, this was the root cause of the correction in early December after the US Hedge Funds and their trading robots could be activated because of the inversion. The remainder of December was also characterized by very high volatility.

The European equities fell to a two-year low with such a high daily loss that was not seen since the Brexit vote. At the end of the month, the US equity market managed to rebound with an unprecedented daily rise (5%), thus the US equities closed the year with a nearly 7% drop but not at annual low. In addition to the deteriorating technical picture, the fall was accompanied by a further increase in trade-war tension after the Huawei's Chief Financial Officer was arrested in Canada on US request. Moreover, in line with the official expectations, the FED raised the target base rate with 25 basis points, bringing additional sellers to the markets.

We received new important impulses from Europe as well. The Italian market has outperformed the developed markets after the European Commission has approved the new Italian 2019 budget plan, which estimates a 2.04 percent deficit target. In addition, Theresa May managed to survive the vote of no confidence but the fact that 117 Members voted against her questions whether the Brexit agreement can pass through the British parliamentary vote.

The fund performed in line with its benchmark index but the fall on the world's stock exchanges has hit the Turkish market as well thus the fund suffered a loss in December. However, performance was positively affected by the weakening of the Lira, which started to weaken again after the 25% increase in the past three months. At the beginning of the month, we continued to increase our banking sector underweight. The Turkish banks were outperformers recently but we believe that the 2019 earnings expectations are too optimistic; we expect underperformance from the sector for next year. In addition, we have increased the weight of defensive papers (Tupras, Turkcell), we continue to hold high active positions compared to the benchmark index and are looking for companies with low indebtedness and favorable pricing with high dividend yields. On December 20th, the benchmark index of the fund changed, it is now following 100% MSCI Turkey 10/40 Net total return local index.
